Boo-Boo Kitty says, "Hubba-Hubba!"

General Traffic Equipment's Pole Bracket Hubs are for side pole mounting of both vehicle and pedestrian signal pipe bracket arms. Commonly called "pole plates", they are an alternative to the ornamental pole clamps. Hubs are fastened to a steel or aluminum pole using 3/4" stainless steel banding and buckles. The hubs eliminate the need to weld a coupling onto a steel pole to attach pipe arms. On a wood pole they may be fastened with lag screws. Please specify color when ordering. Stainless steel banding and buckles are available separately.

PBH-405

- Downward 1 1/4" Threaded Opening for Conduit Riser on Wood Pole Mounting
- Pipe Plugs Available for Downward Opening

PBH-425

- For Wide Pole Mountings
- Single 1 1/2" NPSM Opening
- Rear Exit Hole is either 3/4"- 14 NPSM or 1 1/4" - 11 1/2 NPSM

Please specify powder-coated finish when ordering.
