## Aluminum - "Y" Type Fitting

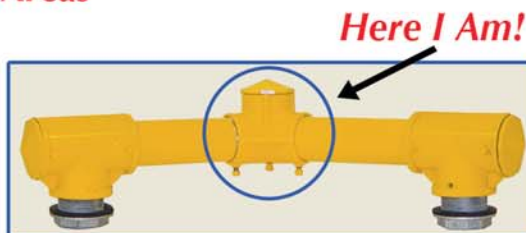

- 47,000 P/S/I Tensile Strength
- Die-Cast Aluminum Construction
- Economical, Low-Cost - Save \$
- Setscrews on all 1 1/2" Openings
- Tapped 1 1/2" - 11 1/2" NPSM
- Gusset Ribs add Strength in Critical Areas
- Powder-Coated or Natural Finish

"Y" Fitting  
YF-270

Typical Application  
VB-2P

Here I Am!

Coco says, "Now I lay  
me down to sleep, I pray  
these "Y"s aren't mine to  
keep!"

General Traffic Equipment's YF-270 is a high-strength alternative for malleable iron fittings, with the corrosion resistance of aluminum. High-strength die-cast aluminum is used in the casting (47,000 P/S/I tensile strength). No more sloppy castings as these are precision die-cast quality. Cast ribs are found in critical areas for uncompromising strength.

Please specify powder-coated  
finish when ordering.
