- *Your Choice of Powder-Coated finishes.*

Please specify powder-coated finish when ordering.

General Traffic Equipment's BALANCE ADJUSTER is one of the most useful and practical signal hardware items that has been developed. The BALANCE ADJUSTER is used on span wire and mast arm signal assemblies to assure plumbness when signal faces are not uniform. Maximum visibility is determined when signals are hung at the proper angle. A universal feature of the BALANCE ADJUSTER allows 360 degree signal indexing with a clamp to hold in any position.
