# SPECIFICATIONS

### Product Description

The General Traffic Equipment Corp Aluminum Backplates are a leading product in the signal backplate market. Designed of high quality 3003 Series Aluminum, the signal backplates are available in a wide variety of configurations and options.

Groups of Four Louvers are an option for either version backplate and one that is growing in popularity. The louver groups are designed as pressure relief in high wind load environments. The hood design of the louvers lets wind pass through in a downward direction.

When it comes to the reflective border, we choose to only use 3M High Intensity Prismatic Grade Reflective. This type of reflective has a unique construction that provides high levels of retroreflectivity for multiple traffic situations.

**SCALLOPED VERSION**

#### Possible Signal Fitment

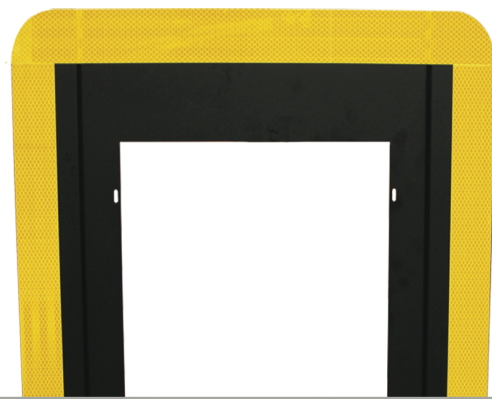

- General Traffic Equipment Corp Signal
- Eagle / Siemens Signal

#### With Louver Groups

Signal Configuration	Part Number
<b>3 Section</b>	<b>BP-A-12-REFLV-SCP-1003</b>
