WE - D825 - T

Bottom View

Please specify powder-coated finish when ordering.

General Traffic has designed new a wire entrance head with large twin wire throat openings instead of the previous solo throat. Durable, die cast aluminum is used in the casting construction for many years of worry-free service in the field. A job-designed "sweeping" twin wireway throats will enable electricians quicker installations. Interior threads are typically 1 1/2" - 11 1/2 NPSM. (Gaged for tolerance).
