

Serrated Cross CF-260 Series

47,000 P/S/I Tensile Strength Die-Cast Aluminum

- Precision Die-Cast Aluminum Construction
- Economical, Low- Cost- Save \$\$
- Sharp Serrated Teeth for Positive Locking
- Setscrews on all 1 1/2" Openings
- Tapped 1 1/2 - 11 1/2 NPSM or Reamed for Slip-Fit over 1 1/2" Pipe
- Gusset Ribs add Strength in Critical Areas
- Closure Caps and Chase Nipples Available in Aluminum, Bronze and Cast Iron
- Powder-Coated or Natural Finish

Please specify powder-coated finish when ordering.

General Traffic Equipment's CF-260 is a high-strength alternative for malleable iron fittings, with the corrosion resistance of aluminum. High-Strength die-cast aluminum is used in the casting (47,000 P/S/I tensile strength). No more sloppy casting or disfigured serrations as these are precision die-cast quality. Cast ribs are found in critical areas for uncompromising strength.
